

ZEN

Cat # 125

This product was the due to the indirect inspiration of Rick Force who suggested that 360 might FUSE better....

and the direct experimentation of artist Chris Wooten who did his own testing.

Thanks Guys !

\$12 / US lb

Hard Wide-range sculpting wax.

At Room Temperature : ZEN is a cross blend of 3Sixty and FUSE. It is not as brittle as 3Sixty, yet is stiffer and harder than FUSE. It is in fact the hardest wax we currently offer that will still bend (under most circumstances) slightly before breaking.

When Heated : When warm , ZEN is as soft and malleable as biscuit dough. It stiffens quicker than FUSE while it still has an extended work time, it does cool faster than FUSE or Max-11. Once cool it is self-supporting.

Un-heated Tools : FUSE can be modeled with most tools without application of heat. It carves cleanly and crisply. It stays firm in the hands , but strong hands can warm and model the wax in small pieces from hand-working alone.

Heated Tools : Wax pens can be used , though it is not an absolute requirement. It remains liquid long enough to model the wax pool fully. It does take longer to cool and set than a traditional tooling waxes. It welds together very nicely with a little heat.

Finishing : Once fully cooled, ZEN polishes well using mechanical and or chemical methods.
